## MAJOR ORDER ACTIONS, MARCH 1965

### Amendments:

Nashville - March 1 (30 FR 824, 1/27/65). Marketing area expanded to include 18 additional Tennessee counties and 3 Kentucky counties. Action classifies as Class II, sour cream mixtures to which cheese or a food substance other than a fluid milk product has been added and which are not labeled "Grade A", bulk fluid milk products disposed of to commercial food establishments, and the butterfat in fluid milk products dumped. A cooperative association is permitted to be a handler on direct-shipped milk. Producer butterfat differential to be rounded to the nearest fifth of a cent.

Red River Valley - March 1 (30 FR 2245, 2/19/65). Marketing area expanded to include 9 additional Oklahoma counties and 4 Texas counties. Action provides a "hold" provision which would continue the pooling of a plant under this order until the third consecutive month in which the greater proportion of its sales are made in another Federal order market with complementary provisions. Action realigns the Class I prices at various locations by increasing the price at Texas plants by 7 cents per hundredweight and decreasing the price at certain locations outside Texas by 3 cents. Other changes provide for the free transfer of bases; and, Class II classification for butterfat in fluid milk products disposed of as livestock feed.

### Suspension:

Delaware Valley - March 11 (30 FR 3311, 3/11/65). Action removes a provision of the supply-demand adjustor which might otherwise increase the Class I price an additional 20 cents in the April through June 1965 calendar quarter.

# FEDERAL MILK ORDER MARKET STATISTICS

## Highlights

### March 1965

Producer Deliveries. A total of 154,150 producers, 8,178 fewer than March 1964, delivered 4.7 billion pounds of milk to regulated handlers in 72 comparable markets during March 1965. This represents an increase of 2.2 percent over producer deliveries in March 1964 <sup>1/</sup>. Average daily delivery per producer increased from 918 pounds in March 1964 to 988 pounds in March of this year. Producer numbers, producer deliveries, average butterfat percentages, and average daily deliveries per producer for individual markets are shown in table 3.

Producer Deliveries Used in Class I. The volume of producer deliveries used in Class I in 72 markets increased 5.7 percent from last year, to a total of 2.9 billion pounds for the month of March 1965. These increases in March sales were partially attributed to lower-than-usual sales during the same month last year. March 1964 contained one less delivery day than March 1965, and the Easter holiday season (school vacations) which usually occurs in April, occurred in March 1964. Consequently, reported sales for March 1965 were unusually high compared to March 1964. The average utilization percentage for March was 61 percent, up from 59 percent last year. Forty-nine markets showed an increase in the utilization percentage, 6 showed no change, and the remaining 17 markets showed a decrease (see table 4).

Gross Class I sales, which comprise total Class I sales by regulated handlers, in-and-out of defined marketing areas, reflected a similar increase of 5.6 percent in the 72 markets for the month of March.

Minimum Prices. The weighted average Class I price paid by handlers in the 72 markets for 3.5 percent milk was \$4.82 per hundredweight, two cents higher than the \$4.80 per hundredweight price in March 1964. Minimum Class I prices in March were higher in 51 markets, unchanged in one market, and lower in the remaining 20 markets.

Producers in the 72 markets received a weighted average blend price of \$4.18 per hundredweight for 3.5 percent milk. This is six cents higher than the March 1964 blend price of \$4.12. Producers received higher blend prices in 57 markets, the same price in two markets, and a lower price in the remaining 13 markets. Class prices, blend prices, and associated butterfat differentials, by markets are reported on table 1.

Whole Milk Sales. Total in-area whole milk sales for March 1965 in 70 marketing areas are estimated to be about 2.0 billion pounds, 5.8 percent above such sales in March of last year. Such increases were the results of factors mentioned above. Complete February in-area sales for total fluid items, and for the four major fluid product groupings (whole milk, skim milk items, mixtures, and cream), are reported on table 6.

## YEAR TO DATE

Minimum Prices. The weighted average Class I price for the January-March period for the 72 markets was \$4.96, six cents higher than the \$4.90 price in 1964. The 1965 weighted average blend price was \$4.29, five cents higher than the blend price of \$4.24 reported for this period in 1964 (see table 2).

Producer Deliveries and Deliveries Used in Class I. Milk deliveries and deliveries used in Class I are reported for individual markets in table 5. In the first three months of this year, compared to the same period in 1964, producer deliveries for the 72 markets were up 2.5 percent, and deliveries used in Class I were up 1.8 percent. Data for the 72 markets and for all markets are summarized below:

Producer Milk Deliveries and Deliveries Used in Class I, January-March
